Litéra Secure File Transfer® provides a way to turn email, the primary communication platform of most companies, into a secure way to send and receive files of any size. Options available to run on-prem or in private or public clouds as controlled by client. Large files can be sent directly from Outlook, while the web portal provides a way to track files from anywhere. Best of all, there is nothing for recipients to install.

- **SharePoint** integration
- Integrates with **Outlook** via add-in
- Full **audit trails**; organizational and individual
- **Web portal** can be accessed anywhere to send and receive files and see views and downloads
- **No limits on file size**; send large, encrypted email and attachments
- Integrated with **metadata scrubbing** solutions
- **Electronic signatures**
- **Central policy management** and full scalability
- **Mobile** accessibility
- **On-prem** infrastructure option

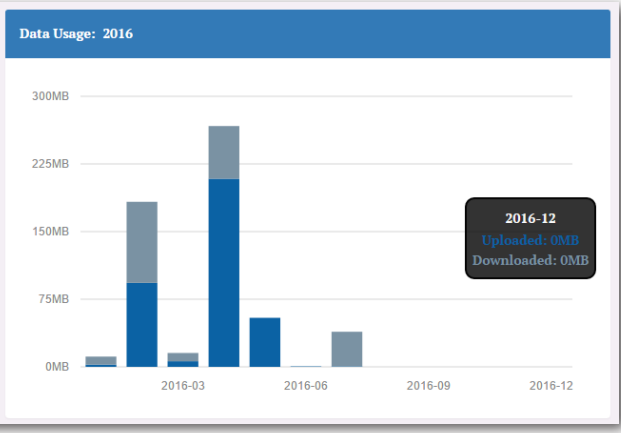

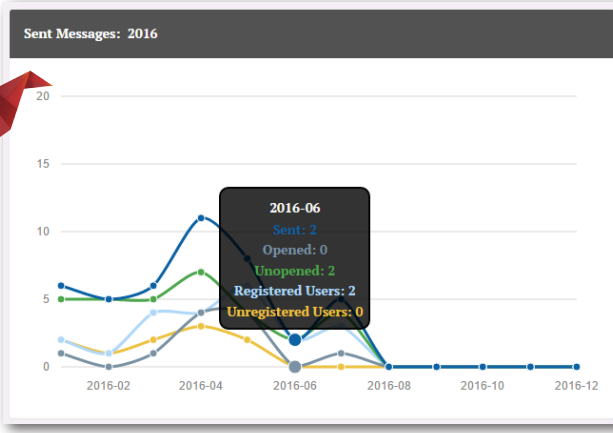

- Send and request files of unlimited size
- Option to run on-prem and in private or public clouds (under control of client)
- Nothing to install for recipients
- Send large files directly from Outlook
- File Tracking available through the web portal
- Integrates with metadata cleaning
- Organizational and individual audit trails record when files are opened, sent, downloaded, etc.

- Works in email, has Outlook add-in
- No limits on file sizes
- File tracking
- 2-factor authentication
- Web portal
- Set expiration on files
- Set open/download permissions based on IP address, location, time, identity
- Mobile App
- Admin controls to set company-wide security policies

- Revoke access to files
- Enforce 2-factor authentication
- Request files from anyone
- Enforce alignment with compliance policies
- Construct and send secure emails directly from a mobile device via mobile app
- Virus Scanning
- Aligns with international standards set forth by HIPAA, PCI and ICO
- Uses Microsoft ID to verify identity of external users
- Desktop uploader app optimizes large files
- Administrator controller policies can be set to automatically send files over a set size securely
- Unchanged workflow
- FTP replacement
- Reduce unnecessary storage on local exchange (reduce storage cost and duplicated data)
- Control who can see files, where they can be viewed and how long recipients have to view them
- Geolocation notification of where a recipient opens a file
- Bypass size limits set by email servers
