REPUTATION MATTERS
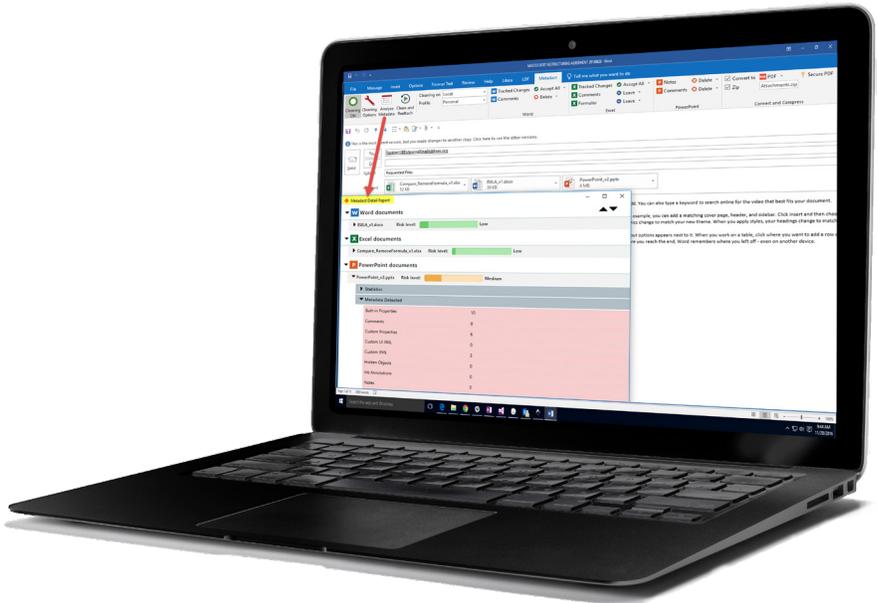

META ◆ DACT

BECAUSE PROPRIETARY DATA MATTERS.

Clean risky metadata from your emails and attachments.

When files are shared electronically, hidden metadata can be transmitted or sent to the wrong recipients, threatening both the integrity of your information and the credibility of the firm. Metadata management is key in addressing the risks of data loss, and firms must invest in adequate security solutions to protect the private interest of clients and their reputation.

HELP KEEP SENSITIVE DATA SECURE WITH METADACT.

Metadact® is a metadata management solution that helps protect against loss of reputation, financial risk, data leakage, and possible malpractice due to inadvertent disclosure.

Whether on-the-go or at the office, Metadact performs a thorough metadata scrubbing of every file, attaches the clean version to an email, and then helps protect the sender from making common email recipient mistakes.

CLEAN	CONTROL	ANALYZE	MOBILE
Remove metadata from Microsoft Office files, ZIPs, PDFs, and images.	Create policies and settings to manage email distribution and control the types of metadata that can be shared.	Get summaries of metadata risk contained in documents based on quantity, type, and location.	Clean and protect document information within documents emailed from mobile devices and send out mobile alerts.

To protect clients, the firm, and yourself, Metadact is a metadata cleaning solution that provides extended insurance against data leakage.

Reduce Risk. Detect and scrub all types of potentially harmful hidden metadata in documents and be confident it goes to its intended audience.

Ensure Compliance. Centralized control allows you to enforce compliance across the entire organization regardless of location or work platform.

Guarantee Control. Safeguard information from leaving your environment with the ability to stop both intentional and accidental loss of information.

" Staff tell me they appreciate that IT 'has them covered.' They like the confidence and convenience of having potentially sensitive metadata automatically removed without their intervention when they send emails with attachments from any device. "

Joe Hernandez, IT Director, Cotton Bledsoe Tighe & Dawson, P.C.

Metadact integrates within your existing programs:

- iManage Work
- NetDocuments
- OpenText, including DM 5, DocsOpen
